

## Two-stage high pressure pump, to suspend on conductor

With size III compression head.

The high pressure unit with an operating pressure of 850 bar for manual operation (hand or foot operated) is mounted in a reclined position on a galvanised U-frame. The high pressure hose is equipped with an oil-tight coupler for connecting the compression head. The pump operates with rapid feed up to the start of compression, i.e. few working strokes are required. A pressure relief valve prevents overloading of the press. Two different versions are available **standalone** or **for attaching to a ladder**.

Accessories:

Case for high pressure press

Pressure gauge, 0-1000 bar
