

Two-stage high pressure pump, freely positionable, with compression head size III

The high pressure unit with an operating pressure of 850 bar for manual operation (hand or foot operated) is mounted in a reclined position on a galvanised U-frame. The high pressure hose is equipped with an oil-tight coupler for connecting the compression head. The pump operates with rapid feed up to the start of compression, i.e. few working strokes are required. A pressure relief valve protects the pump and the compression head from overloading.

Two different versions are available **standalone** or **for attaching to a ladder**.

Accessories:

- Case for high pressure press
- Pressure gauge, 0-1000 bar

Picture may vary.

Technical Data

Article no.		305 800 011
Operating pressure	(bar)	850
Hose length	(mm)	3000
General purpose		Freely positionable
Hydraulic oil	(cm³)	600
Nominal compression force	(kN)	240
including compression head		yes
