

Adapter, Type C2C

1-pole voltage detectors of the KP-Test 5 series are available both as complete design (inclusive insulating pole) and as separate design (without insulating pole). When using voltage detectors with separate design the operators use their own insulating poles, whereby the minimum requirements regarding the insulating characteristics as well as the minimum insulating lengths have to be absolutely fulfilled.

PFISTERER offers a series of adapter by which separate design voltage detectors of the KP-Test 5 series could be mounted on insulating poles with different connection variants.

Adapter from universal adapter M8 multi-gear coupling to various other systems. Can be used for KP-Test 5HL as well.

Picture may vary.

Technical Data

Article no.	935 101 003
Type	C2C
Description	Universal - Hexagonal SW 12
Remark	Hexagonal SW 12
